The image shows a Visual Studio Code editor window with a Terraform project. The Explorer sidebar on the left shows the file structure:

- EXPLORER
 - provider.tf
 - s3.tf
 - variables.tf
 - var.tfvars
 - ec2.tf
 - vpc.tf
 - te BLACKBOX
- TERRAFORMPRAC
 - .terraform\providers\...
 - LICENSE.txt
 - terraform-provider-a...
 - .terraform.lock.hcl
 - ec2.tf
 - provider.tf
 - s3.tf
 - terraform.tfstate
 - terraform.tfstate.backup
 - var.tfvars
 - variables.tf
 - vpc.tf
- PORTS
 - No forwarded ports. Forward a port to access your locally running services over the internet.
- OUTLINE
- TIMELINE

The main editor area shows the vpc.tf file with the following Terraform code:

```
64 }

resource "aws_vpc" "main" {
  cidr_block = "10.0.0.0/16"
  enable_dns_hostnames = true
  enable_dns_support = true
  instance_tenancy = "default"
  tags = {
    Name = "vpc"
  }
}

resource "aws_internet_gateway" "igw" {
  attach_to = [aws_vpc.main.id]
  tags = {
    Name = "igw"
  }
}

resource "aws_subnet" "public" {
  cidr_block = "10.0.1.0/24"
  availability_zone = "us-east-1a"
  map_public_ip_on_launch = true
  tags = {
    Name = "public-subnet"
  }
}

resource "aws_subnet" "private" {
  cidr_block = "10.0.2.0/24"
  availability_zone = "us-east-1a"
  tags = {
    Name = "private-subnet"
  }
}

resource "aws_route_table" "public_rt" {
  vpc_id = aws_vpc.main.id
  routes = [
    {
      cidr_block = "0.0.0.0/0"
      gateway_id = aws_internet_gateway.igw.id
    }
  ]
  tags = {
    Name = "public-route-table"
  }
}

resource "aws_route_table_association" "public_assoc" {
  subnet_id = aws_subnet.public.id
  route_table_id = aws_route_table.public_rt.id
  tags = {
    Name = "public-rt-assoc"
  }
}
```

The Output window at the bottom shows the execution of 'terraform apply -auto-approve'. The output indicates that the VPC was created successfully, followed by the Internet Gateway, Subnets, Route Table, and Route Table Association. The final status is 'Apply complete! Resources: 6 added, 0 changed, 0 destroyed.' The status bar at the bottom shows the current file is vpc.tf and the workspace is BLACKBOX Agent.

The screenshot displays the Visual Studio Code interface with a Terraform project. The Explorer sidebar on the left shows the file structure, including `provider.tf`, `s3.tf`, `variables.tf`, `var.tfvars`, `ec2.tf`, and `terraform.tfstate`. The main editor window shows the `ec2.tf` file with the following content:

```
ec2.tf > output "public_ip"
1  resource "aws_instance" "ec2" {
7    tags = {
9    }
10 }
11
12 output "public_ip" {
13   value = aws_instance.ec2.public_ip
14 }
```

Below the editor, the TERMINAL panel shows the output of a Terraform command:

```
+ private_ip = (known after apply)

Plan: 1 to add, 0 to change, 0 to destroy.

Changes to Outputs:
  + public_ip = (known after apply)
aws_instance.ec2: Creating...
aws_instance.ec2: Still creating... [00m10s elapsed]
aws_instance.ec2: Creation complete after 18s [id=i-04a93c4fe1c510a81]

Apply complete! Resources: 1 added, 0 changed, 0 destroyed.

Outputs:

public_ip = "34.229.145.10"
PS C:\Users\ADMIN\OneDrive\Desktop\terraformprac>
```

The right sidebar shows the SESSIONS panel with a session titled "Terraform initializati..." completed in 6s 1 day. At the bottom right, there is a snippet bar with a snippet titled "ec2.tf" containing the text "Describe what to build".
