The screenshot shows the Visual Studio Code Explorer sidebar. At the top, the title bar says "EXPLORER" with a three-dot menu icon to its right. Below the title bar is a dark grey header bar with a downward arrow and the text "TERRAFORMPRAC". The main area of the sidebar lists the following files and folders:

- > .terraform
- ≡ .terraform.lock.hcl
- 🔗 provider.tf
- 🔗 s3.tf (highlighted with a dark blue background)
- { } terraform.tfstate
- ≡ terraform.tfstate.backup

Below this list is a "PORTS" section, also with a downward arrow. It contains the text: "No forwarded ports. Forward a port to access your locally running services over the internet." At the bottom of the sidebar, there are three icons: a person icon, a gear icon, and a play icon. The "OUTLINE" and "TIMELINE" tabs are visible at the very bottom.

Welcome provider.tf s3.tf

s3.tf

```
1 # resource "aws_s3_bucket" "siets31" {
2 #   bucket = "buckettesttest7781"
3
4 #   tags = {
5 #     Name      = "My bucket"
6 #     team      = "my team"
7 #     platform  = "terraform"
8 #   }
9 # }
```

A screenshot of a mobile application interface, likely a chat or documentation app. At the top, there's a navigation bar with icons for menu, expand/collapse, settings, and search, followed by a title bar that says "TERRAFORM I..." and a tab icon. The main content area shows a chat message from a user with a purple bird icon, stating "i configured in cmd". Below this, a response from an assistant (indicated by a small "A" icon) says "Great! Since you configured your AWS credentials using aws configure in the command prompt, you do not need to specify access_key and secret_key in your provider block." The assistant's message continues: "Your [provider.tf] is already correct. You can now run terraform plan again. If you encounter any errors, let me know and I'll help troubleshoot." At the bottom of the chat bubble are three icons: a refresh/circular arrow, a thumbs up, and a thumbs down. Below the chat bubble is a text input field with a placeholder "Describe what to build" and a "+" icon on the left. At the very bottom is a navigation bar with four icons: a plus sign, three dots, a circle, and an upward arrow.

```
s3.tf > resource "aws_s3_bucket" "siets31" > tags > abc platform
1 resource "aws_s3_bucket" "siets31" {
2     bucket = "buckettesttest7781"
3
4     tags = {
5         Name      = "My bucket"
6     team = "my team"
7     platform="terraform"
8     }
9 }
```

```

i configured in cmd

Great! Since you configured your AWS credentials using `aws configure` in the command prompt, you do not need to specify `access_key` and `secret_key` in your provider block.

Your `provider.tf` is already correct. You can now run `terraform plan` again. If you encounter any errors, let me know and I'll help troubleshoot.

PS C:\Users\ADMIN\OneDrive\Desktop\terraformprac> terraform init

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see any changes that are required for your infrastructure. All Terraform commands should now work.

If you ever set or change modules or backend configuration for Terraform, rerun this command to reinitialize your working directory. If you forget, other commands will detect it and remind you to do so if necessary.

PS C:\Users\ADMIN\OneDrive\Desktop\terraformprac>
