[root@ip-172-31-7-215 ~]# aws eks update--kubeconfig --name testeks

aws: [ERROR]: argument operation: Found invalid choice 'update--kubeconfig'

Maybe you meant:

* update-kubeconfig

usage: aws [options] <command> <subcommand> [<subcommand> ...] [parameters]

To see help text, you can run:

aws help

aws <command> help

aws <command> <subcommand> help

[root@ip-172-31-7-215 ~]# aws eks update-kubeconfig --name testeks --region us-east-1

Added new context arn:aws:eks:us-east-1:570263067623:cluster/testeks to /root/.kube/config

[root@ip-172-31-7-215 ~]#

Create role

An IAM role is an identity you can create that has specific permissions with credentials that are valid for short durations. Roles can be assumed by entities that you trust.
